

Database and Data File Management

Oct 6/7/8, 2010

Overview

- ▶ Database Management and Access
- ▶ Data File Management
- ▶ Course Feedbacks and Q&A

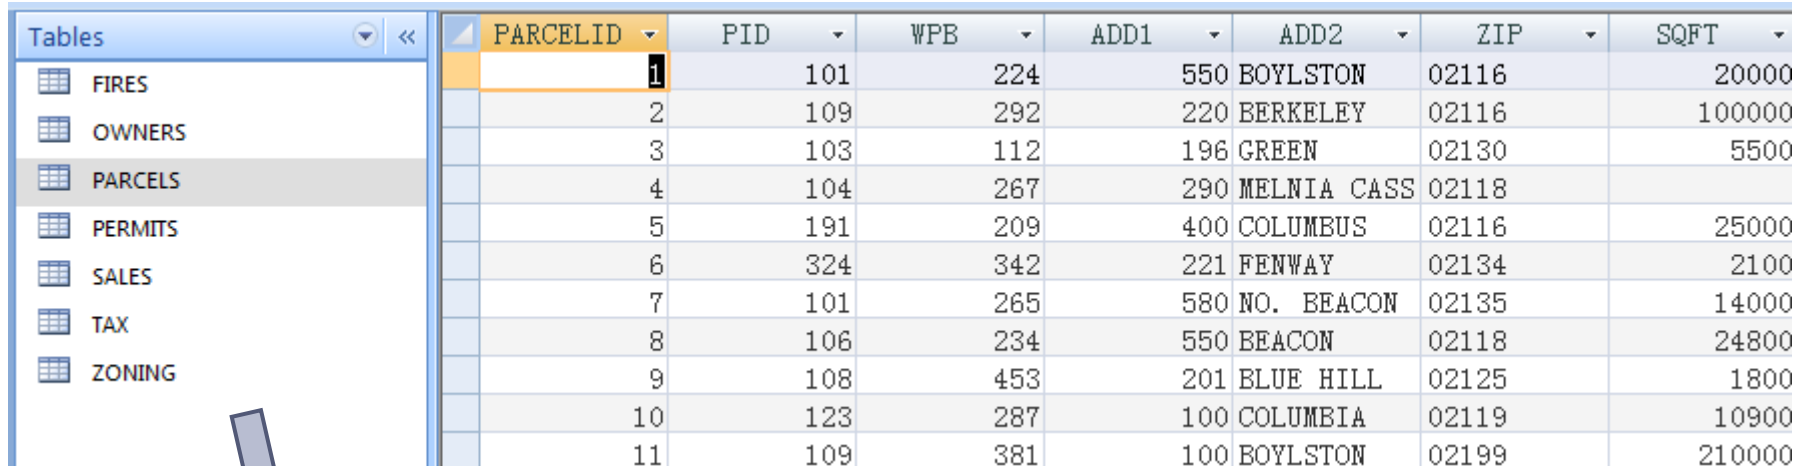

Database Management

Definitions, Definitions...

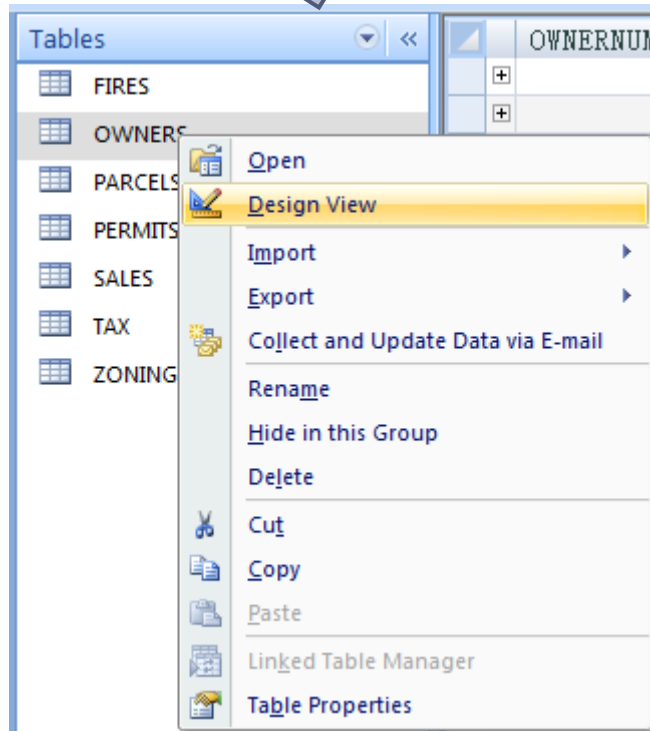

- ▶ **Database:** Collection of tables and queries
- ▶ **Table (or relational table)**
 - ▶ Collection of records
- ▶ **Record**
 - ▶ A record is consist of several fields (or attributes)
- ▶ **Query**
 - ▶ Set of instructions to a database “engine” to retrieve, sort and format the returning data.
 - ▶ “find the # of housing sales in my database”

What is the difference between a table and a query?

PARCELID	PID	WPB	ADD1	ADD2	ZIP	SQFT
1	101	224	550	BOYLSTON	02116	20000
2	109	292	220	BERKELEY	02116	100000
3	103	112	196	GREEN	02130	5500
4	104	267	290	MELNIA CASS	02118	
5	191	209	400	COLUMBUS	02116	25000
6	324	342	221	FENWAY	02134	2100
7	101	265	580	NO. BEACON	02135	14000
8	106	234	550	BEACON	02118	24800
9	108	453	201	BLUE HILL	02125	1800
10	123	287	100	COLUMBIA	02119	10900
11	109	381	100	BOYLSTON	02199	210000

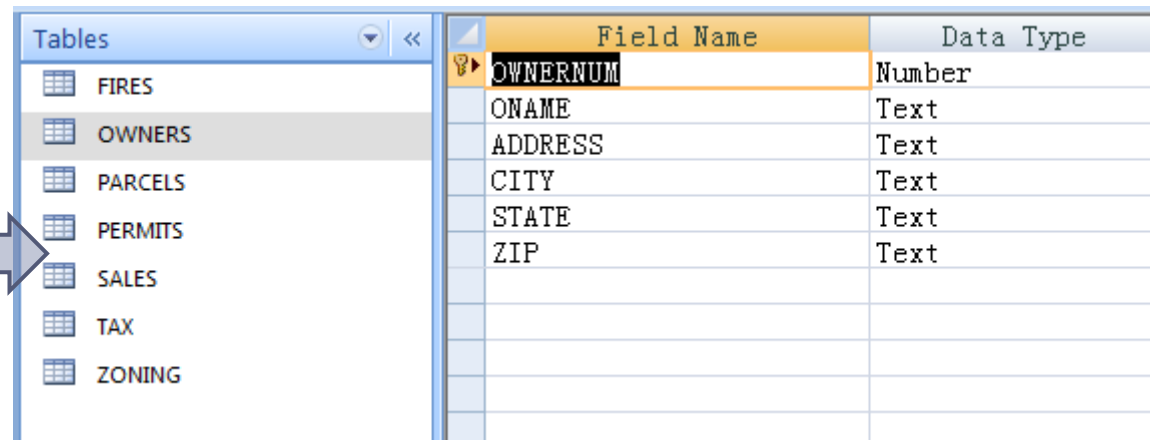

Tables

- FIRES
- OWNERS
- PARCELS
- PERMITS
- SALES
- TAX
- ZONING

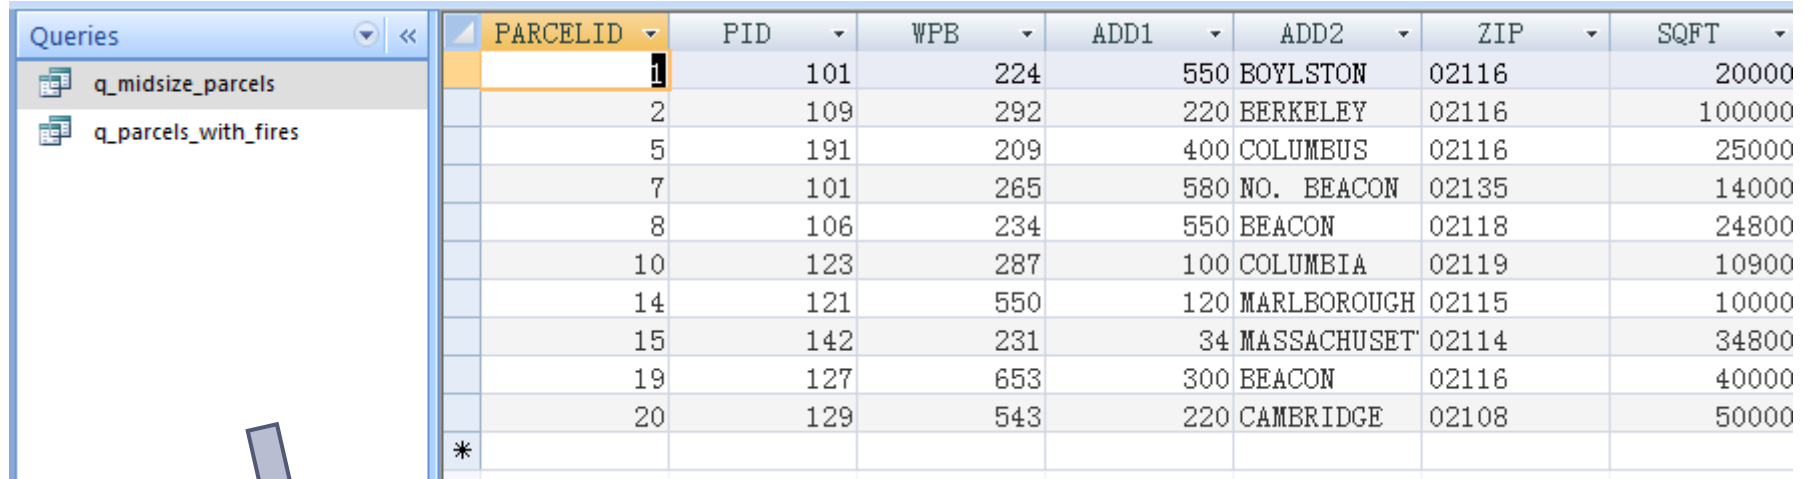

Context Menu:

PARCELS

- * PARCELS
- PARCELS.PARCELID
- PARCELS.SQFT

Field:	PARCELS.*	PARCELID	SQFT
Table:	PARCELS	PARCELS	PARCELS
Sort:		Ascending	
Show:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Criteria:			>=10000 And <=10000
or:			

Create MS Access database

Querying MS Access or any relational database...

- ▶ Querying = extracting information out of the database
- ▶ This is done using the **S**tructured **Q**uery **L**anguage (SQL)

Select PARCELID, ADD2, SQFT, LANDUSE
From PARCELS
Where SQFT>5000

Field:	PARCELID	ADD2	SQFT	LANDUSE
Table:	PARCELS	PARCELS	PARCELS	PARCELS
Sort:				
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Criteria:			>5000	
or:				

Select fields
Select table
Select records

Example table

PARCELID	PID	WPB	ADD1	ADD2	ZIP	SQFT	ONUM	LANDUSE
1	101	224	550	BOYLSTON	02116	20000	18	C
2	109	292	220	BERKELEY	02116	100000	32	C
3	103	112	196	GREEN	02130	5500	11	R3
4	104	267	290	MELNIA CASS	02118		18	CL
5	191	209	400	COLUMBUS	02116	25000	10	E
6	324	342	221	FENWAY	02134	2100	55	CM
7	101	265	580	NO. BEACON	02135	14000	32	A
8	106	234	550	BEACON	02118	24800	200	C
9	108	453	201	BLUE HILL	02125	1800	9	R1
10	123	287	100	COLUMBIA	02119	10900	32	
11	109	381	100	BOYLSTON	02199	210000	18	C
12	110	250	200	MORRISSEY	02127	5300	89	R3
13	183	236	55	HARRISON	02118		38	R2
14	121	550	120	MARLBOROUGH	02115	10000	18	A
15	142	231	34	MASSACHUSET	02114	34800	32	
16	103	276	930	COMMONWEALT	02116	9600	200	A
17	131	283	660	TREMONT	02120	1500	29	R1
18	145	229	45	HUNTINGTON	02119	9500	18	A
19	127	653	300	BEACON	02116	40000	32	C
20	129	543	220	CAMBRIDGE	02108	50000	100	E

Querying MS Access or any relational database...

- ▶ Example:
 - ▶ Wildcard characters: '*' '%'
 - ▶ AND vs. OR

```
Select PARCELID, ADD2, SQFT, LANDUSE  
From PARCELS  
Where LANDUSE like 'C' OR LANDUSE  
like 'R*' OR LANDUSE like 'A'
```

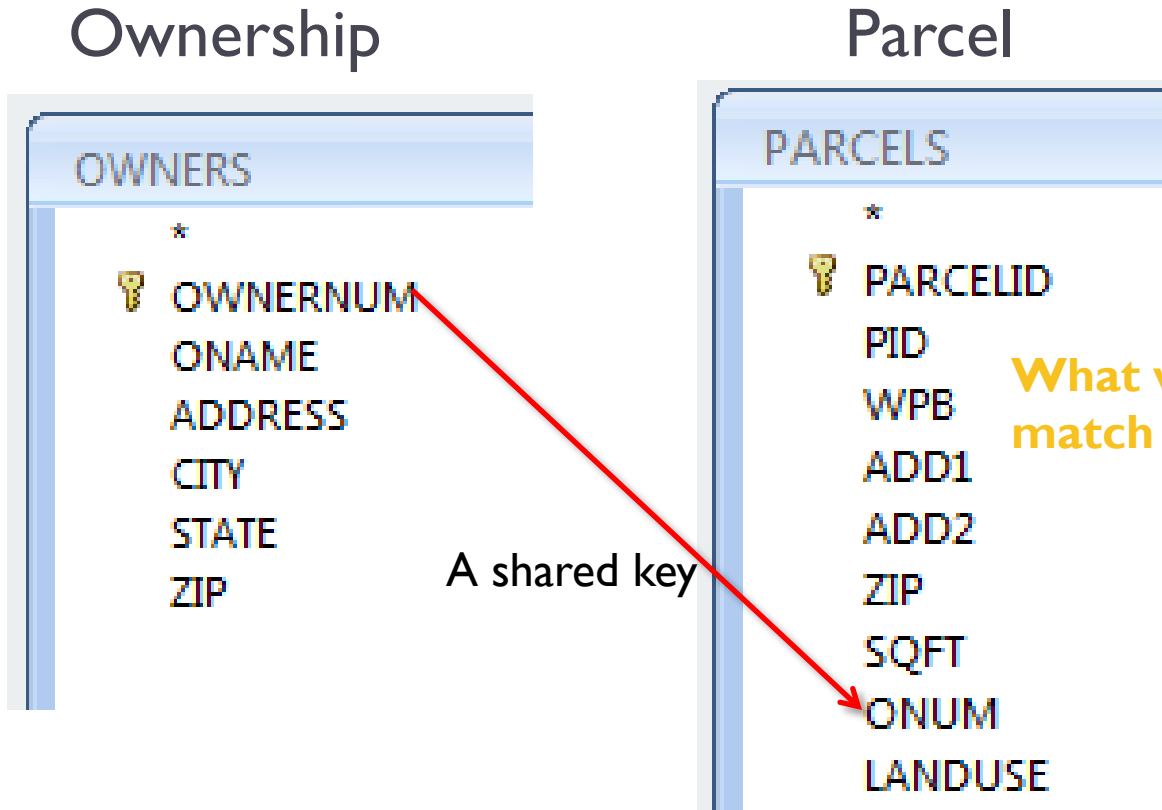

Field:	PARCELID	LANDUSE	ADD2	SQFT
Table:	PARCELS	PARCELS	PARCELS	PARCELS
Sort:				
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Criteria:		Like 'C'		
or:		Like 'R*'		
		Like 'A'		

Select fields

Select records

Querying MS Access or any relational database...

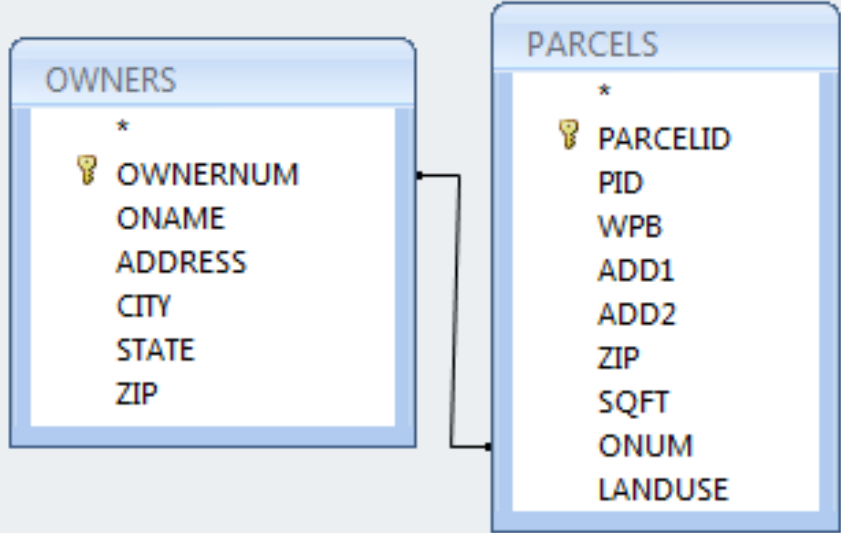

- ▶ What if you want to query two tables?

What will happen if you don't match up the tables with ownerid?

Shared key (ownerid) that is:

1. unique to identify each row
2. can be referenced by another table

Field:	PARCELID	SQFT	OWNERNUM	ONUM	ONAME
Table:	PARCELS	PARCELS	OWNERS	PARCELS	OWNERS
Sort:					
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Criteria:		>5000			

```

SELECT PARCELS.PARCELID, PARCELS.SQFT, OWNERS.OWNERNUM, PARCELS.ONUM,
OWNERS.ONAME
FROM OWNERS INNER JOIN PARCELS ON OWNERS.OWNERNUM = PARCELS.ONUM
WHERE (((PARCELS.SQFT)>5000));
  
```

From queries to tables

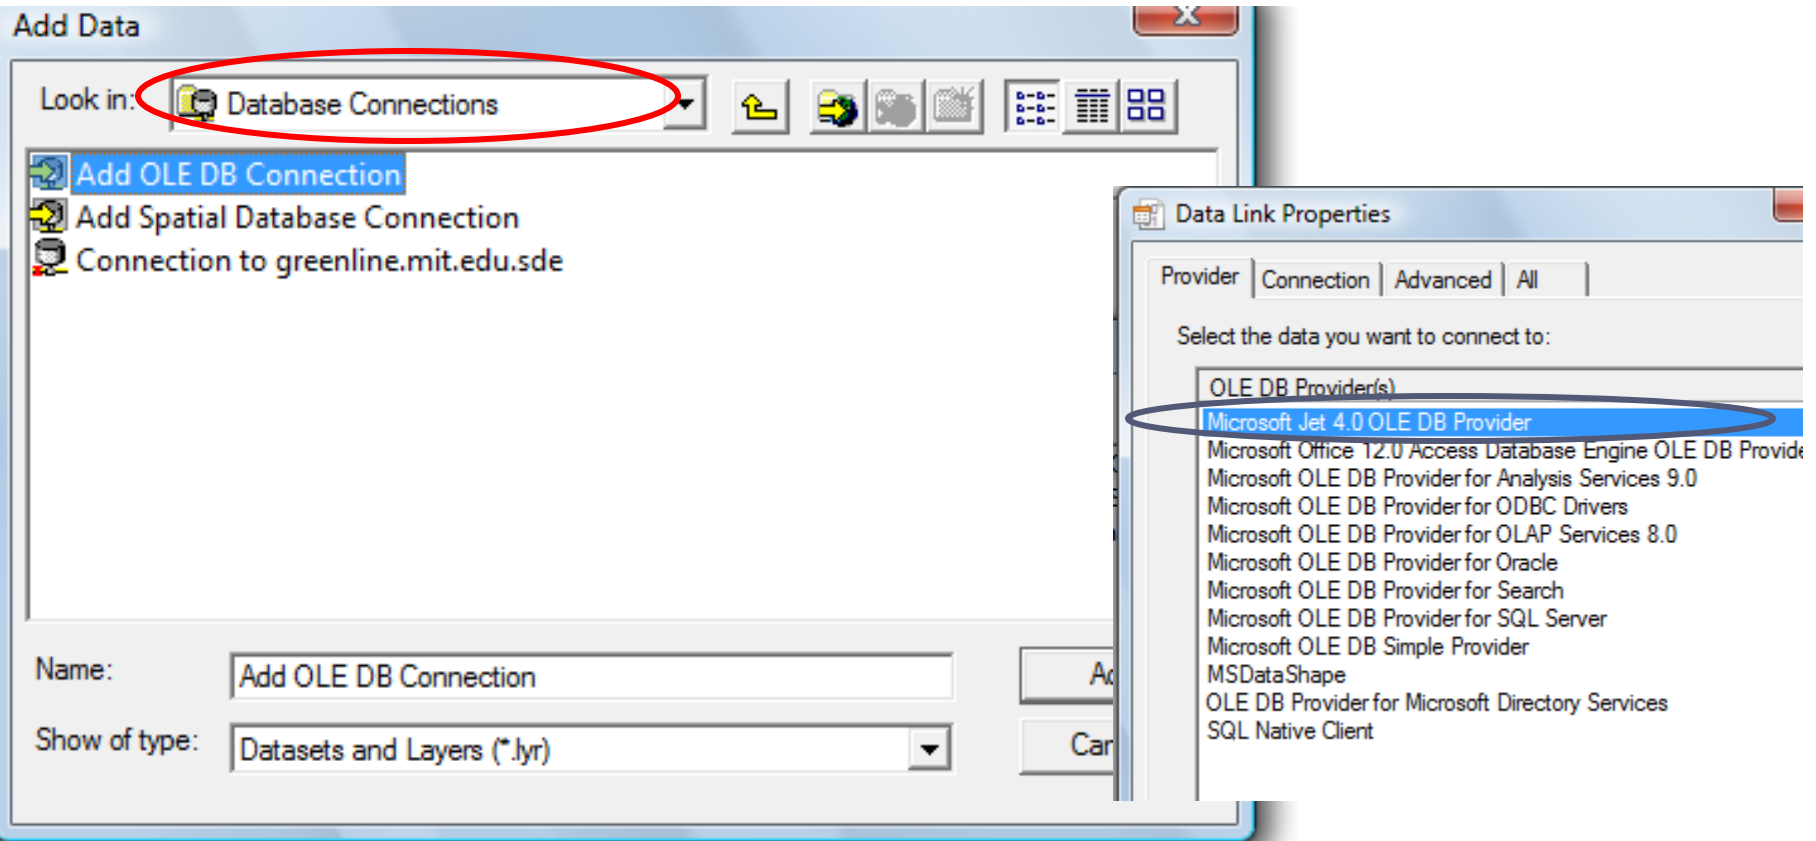

The screenshot displays a Microsoft Access database interface. At the top, two tables are shown: **OWNERS** and **PARCELS**. The **OWNERS** table has a primary key **OWNERNUM** and fields **ONAME**, **ADDRESS**, **CITY**, **STATE**, and **ZIP**. The **PARCELS** table has a primary key **PARCELID** and fields **WPB**, **ADD1**, **ADD2**, **ZIP**, **SQFT**, **ONUM**, and **LANDUSE**. A relationship line connects the **OWNERNUM** field in the **OWNERS** table to the **ONUM** field in the **PARCELS** table. Below the tables, a table view shows a query with columns **ID**, **SQFT**, **OWNERNUM**, and **ONUM**. The **SQFT** column is linked to the **PARCELS** table, and the **OWNERNUM** column is linked to the **OWNERS** table. A context menu is open over the **PARCELS** table, listing various options. The **Make Table Query...** option is highlighted in orange.

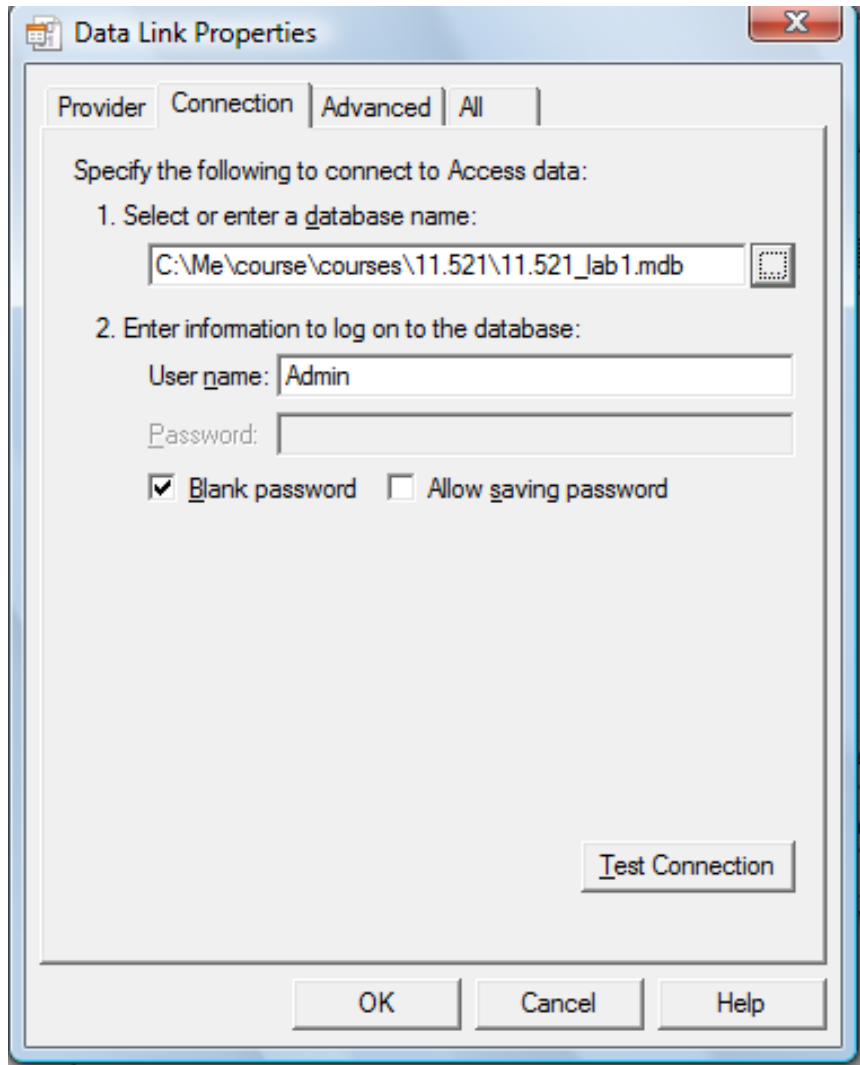

ID	SQFT	OWNERNUM	ONUM
S	PARCELS	OWNERS	PARC

Import MS-Access tables to ArcGIS

-Use MS Access database provider to talk to MS-Access
2003

I. Specify the location of your database
(**must be a MS Access 2003 database**)

2. Test connection

3. Click “OK”

Miscellaneous

- ▶ One OLE DB connection will create only one connection to the database.
- ▶ ArcGIS will remember the connection for you.

Data File Management

If you work on computers in the lab (37-312, or CRON), for lab exercises/homework or in-class test, we advise you to follow the steps as described below to save your time and efforts in retrieving your previously created maps.

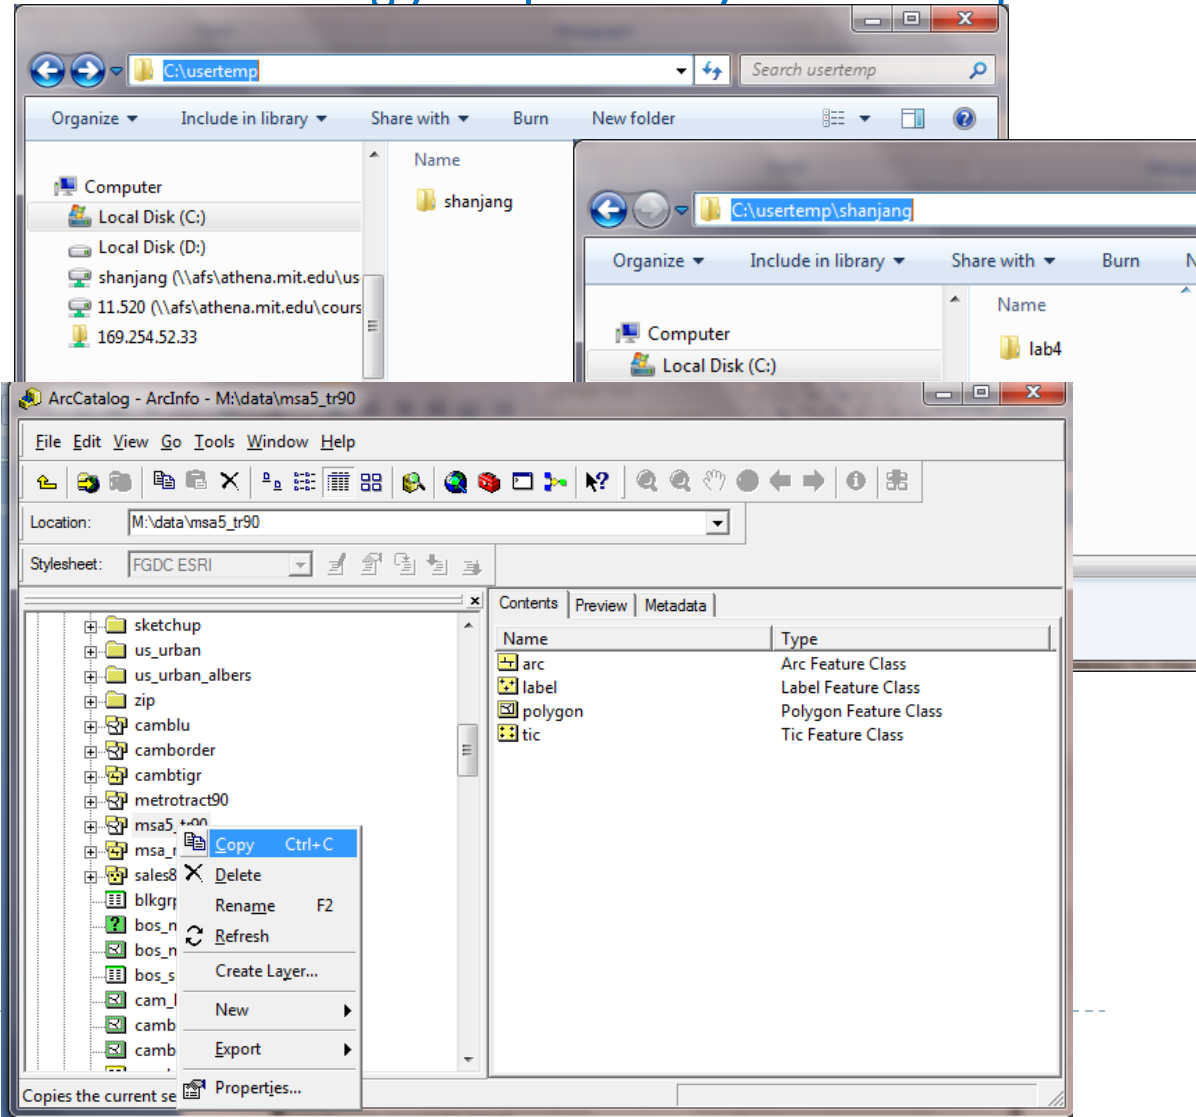

➤ Create your own folder on the local machine

Under C:\usertemp (if you are working in 37-312) or C:\Users (if you are working in the CRON labs)

e.g.,

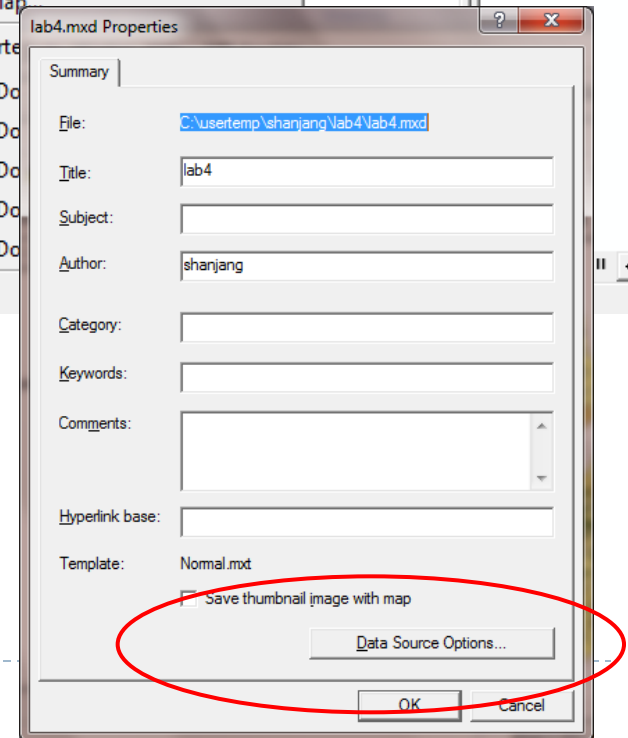

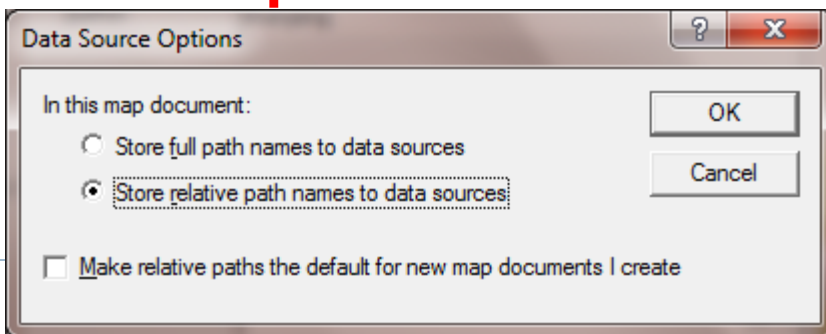

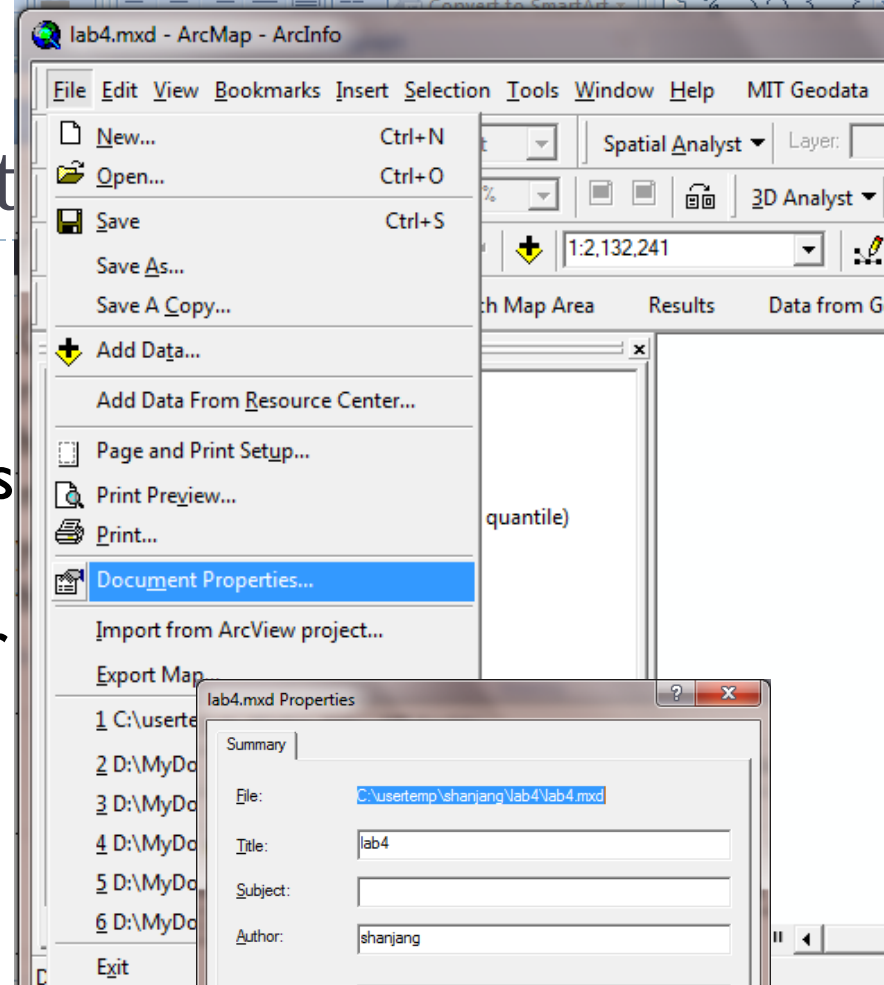

C:\usertemp\shanjang\lab4

➤ Copy GIS data from Course Locker to your local folder by Using **ArcCatalog**

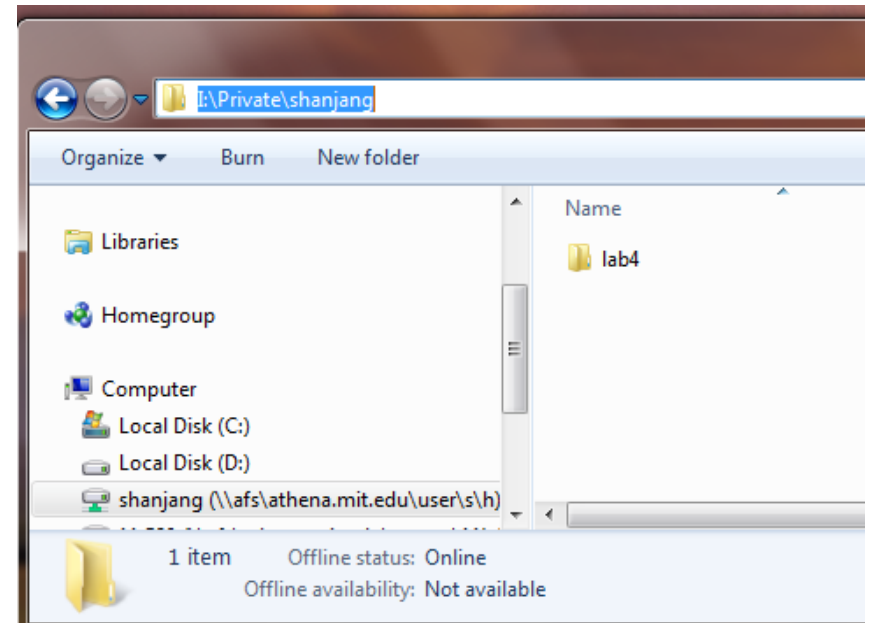

Data File Management

- ▶ Create your map, and save path as **relative path** instead of full path, if you have all your datasets in the previously mentioned newly creased folder under your MIT kerberobs name, by choosing from
 - ▶ File → Document Properties → Data Source Options → **Store relative path names to data**

Data File Management

- ▶ After you finish your lab session, please remember to move your local folder **to your I drive**, so that you don't lose anything next time.

- ▶ When you resume your work next time, just move back your folder from your I drive to the local machine, such as C:\usertemp\shanjang\
