

L9: Performance

Nickolai Zeldovich
6.033 Spring 2012

Simple server

```
while True:  
    wait for request  
    data = read(name)  
    compute  
    send response
```

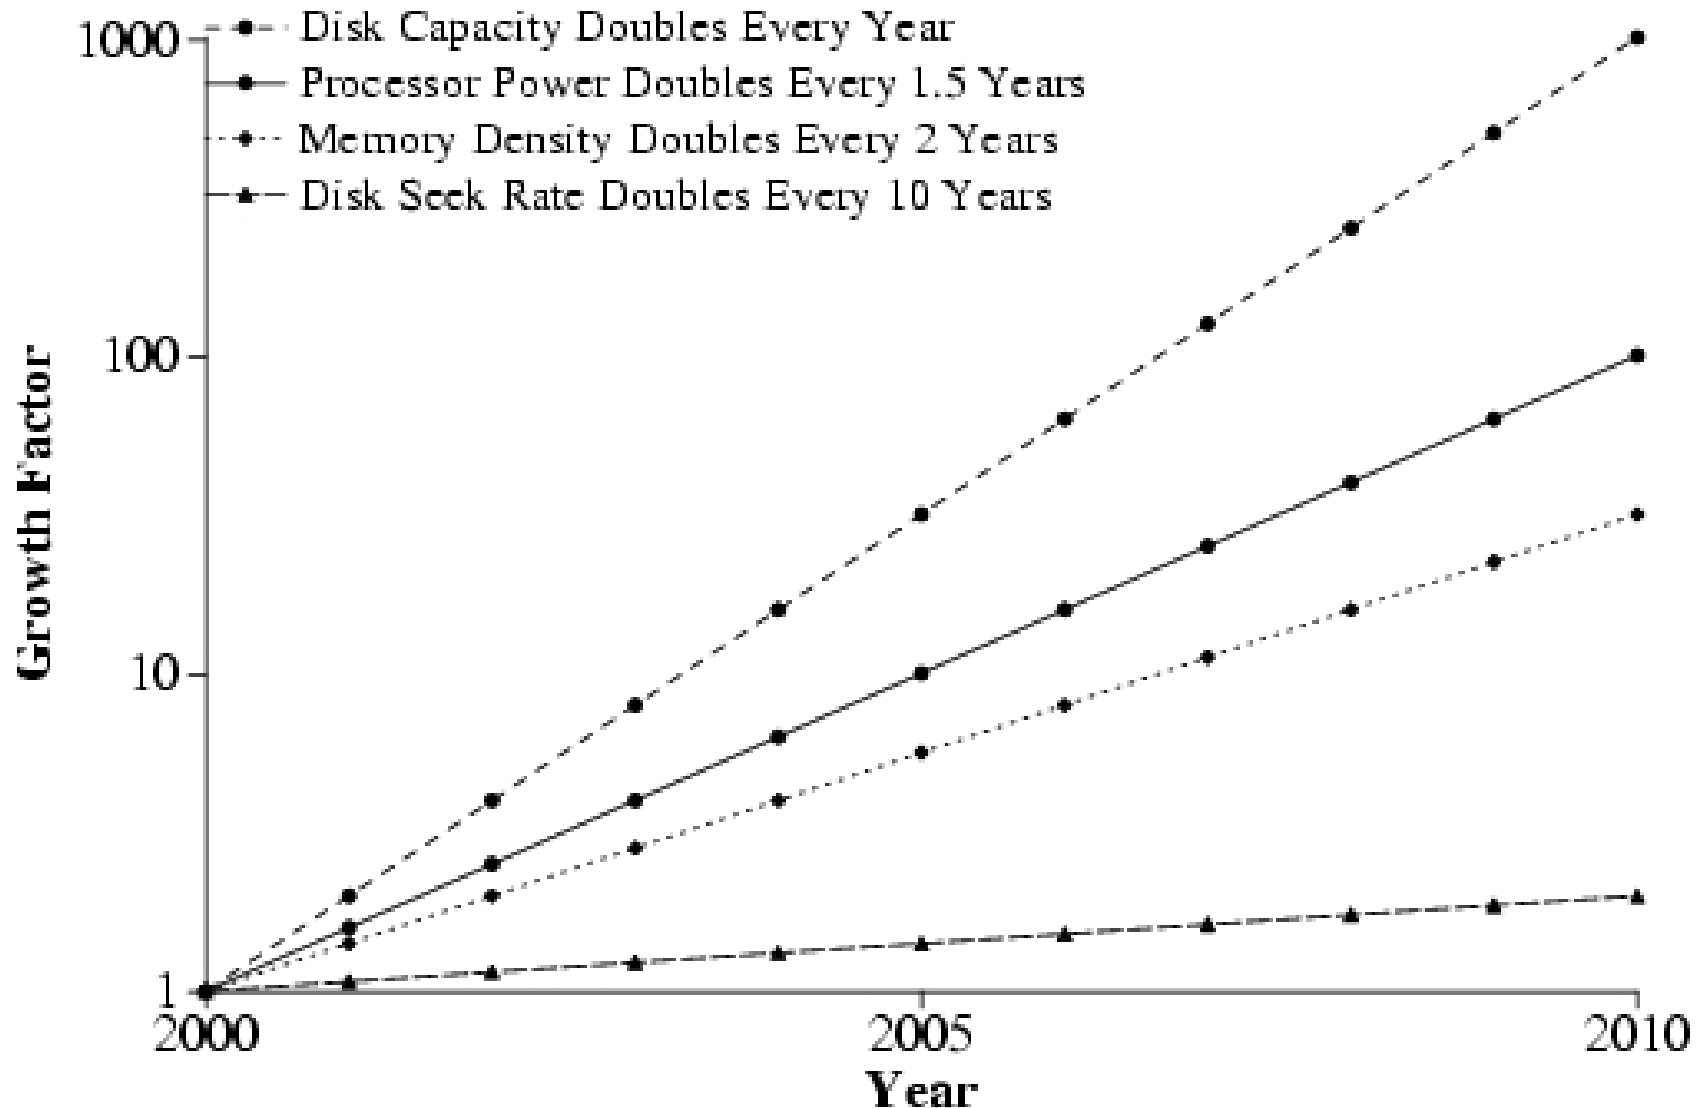

Hitachi 7K400

Disk sectors

I/O bottleneck

Hypothetical Effects of Dissimilar Doubling Rates Over a Decade

Important numbers

- Latency:

- 0.000001 msec: one instruction (1ns)

- 0.0001 msec: one DRAM load (100ns)

- 0.1 msec: LAN network

- 10 msec: random disk I/O

- 25 msec: east coast → west coast (fiber)

- Throughput:

- 10,000 MB/sec: DRAM

- 1,000 MB/sec: LAN (or 100 MB/sec)

- 100 MB/sec: sequential disk (or 500 MB/sec)

- 1 MB/sec: random disk
